Many theories attempt to explain human behavior, health, and mental illness. Each theory suggests how normal development occurs based on the theorist's beliefs, assumptions, and view of the world. These theories suggest strategies that the clinician can use to work with clients.

Psychosocial Theories - Nurseslabs

Constructs capture the “what” of theories (i.e., what concepts are important for explaining a phenomenon), propositions capture the “how” (i.e., how are these concepts related to each other), logic represents the “why” (i.e., why are these concepts related), and boundary conditions/assumptions examines the “who, when, and where” (i.e., under what circumstances will these concepts and relationships work).

Study Notes and Theory - A CISSP Study Guide

In cognitivism theory, learning occurs when the student reorganises information, either by finding new explanations or adapting old ones. This is viewed as a change in knowledge and is stored in the memory rather than just being viewed as a change in behaviour. Cognitive learning theories are mainly attributed to Jean Piaget.
