A total eclipse happens when either the Sun or the Moon is completely covered or blocked out by another planet. A total Solar eclipse blocks out the light of the Sun, while a total Lunar eclipse completely blocks the light of the Moon. The Moon often takes on a vivid red color during a total Lunar eclipse. Partial Eclipse

### The Ultimate Guide to Lunar & Solar Eclipses | Astrology ...

A lunar eclipse is what happens when, if you were standing on the Moon, you would see Earth block out the Sun. It involves the Moon passing directly into Earth's shadow as all three bodies align - just as part of Earth passes into the Moon's shadow during a solar eclipse - and, in so doing, it causes some odd changes in appearance.

List of Solar and Lunar Eclipses Worldwide 2020. Check where the eclipses are visible and if you can see them.

### Solar and Lunar Eclipses Worldwide - 2020

A lunar eclipse occurs when the Moon moves into the Earth's shadow. This can occur only when the Sun, Earth, and Moon are exactly or very closely aligned (in syzygy) with Earth between the other two, and only on the night of a full moon. The type and length of a lunar eclipse depend on the Moon's proximity to either node of its orbit.
