Engineers and applied scientists (but not, of course, mathematicians) are more concerned with using methods than with proving that they can be used. However, they 'must be satisfied that the methods are fit to be used, and it is hoped that students will perform sufficient

There are many uses  
for numerical methods  
in engineering.

However, these  
applications are not  
always conveyed to  
students. Perhaps the  
easiest to grasp at all  
levels is that real world  
data often comes in  
the form of discrete  
data points.

qualitative properties of the integrator are critical to the accuracy of the numerical simulation and reliability of long range predictions. In engineering applications, numerical methods for studying dynamical systems are usually designed to give rapid and robust numerical solutions with small overall error.
