Random is a website devoted to probability, mathematical statistics, and stochastic processes, and is intended for teachers and students of these subjects. The site consists of an integrated set of components that includes expository text, interactive web apps, data sets, biographical sketches, and an object library.

and related fields, a stochastic or random process is a mathematical object

usually defined as a family of random variables.

Historically, the random variables were associated with or indexed by a set of numbers, usually

viewed as points in time, giving the

interpretation of a stochastic process

representing numerical values of some system

(equivalently, does not affect the odds).

Similarly, two random variables are independent if the realization of one does not affect the probability distribution of the other.
