### Review And Reinforce Respiration Answer [PDF, EPUB EBOOK]

Tides can be tracked at specific locations in order to predict the height of a tide, i.e. when low and high tide will occur in the future. The Bay of Fundy in Nova Scotia, Canada has the highest tidal range of any place on the planet. The tides there range from 11 feet (3.5 m) to 53 feet (16 m) and cause erosion, creating massive cliffs.

**Review And Reinforce Respiration Answer**

The tidal cycle can begin with high tide. For 6 hours and 13 minutes after high tide, the tide recedes in what is known as ebb tide. 6 hours and 13 minutes following high tide is low tide. After low tide, the flood tide begins as the tide rises for the next 6 hours and 13 minutes until high tide occurs and the cycle begins again.

**What Creates the Tides and Determines Their Timing**

The tides are created by the pull of the moon and the sun. When those bodies are aligned with one another, their gravitational forces act in the same direction and reinforce one another, creating the maximum possible tidal bulges, called the spring tides.
